

ALKALINITY PRODUCTION SERVICES PURCHASE AGREEMENT

	Purchase overview				
Description	Stripe, Inc. (known as “Stripe”), Shopify, Inc. (known as “Shopify”) and Google LLC (known as “Google”, together with Stripe and Shopify) will pay Leilac US Inc. (“ Company ”) for the performance of 60 Operational Conditions (defined below), including 10 Runs (defined below) specifically sent to the Testing Party (defined in Appendix B), in each case involving material designed for Ocean Alkalinity Enhancement (“ OAE Materials ”) that will be produced and verified (“ Alkalinity Production Services ”) as described in Appendix A .				
Type	Roadmap to lowest cost, electrically heated zero carbon OAE Materials, in support of ocean liming (“ OL ”)				
Purchase amount	\$500,000 USD				
Service quantity	No less than 60 Operational Conditions “Operational Condition” means, a unique and specific set of process parameters, feedstock, or plant configuration using the BatMn plant. Each Operational Condition must be proposed to Buyer in writing in reasonable detail, including the rationale for its parameters, subject to Buyer’s reasonable approval. For each Operational Condition, key material performance metrics will be measured by the Company at the Company laboratory. No less than ten Runs “Run” means a techno economically relevant sample of 100kg or more from an Operational Condition that Company has proposed to Buyer in writing in reasonable detail and that Buyer has reasonably approved for being shipped to the Testing Party. Operational Conditions and Runs will involve only OAE Material processed by the BatMn plant, designed to enhance ocean alkalinity, and produced by Company.				
Estimated schedule	The Alkalinity Production Services will be performed according to the following schedule: <table border="1"> <thead> <tr> <th>Year</th><th>Quantity</th></tr> </thead> <tbody> <tr> <td>2026</td><td>60 Operational Conditions, 10 Runs (each producing a 100kg test sample)</td></tr> </tbody> </table>	Year	Quantity	2026	60 Operational Conditions, 10 Runs (each producing a 100kg test sample)
Year	Quantity				
2026	60 Operational Conditions, 10 Runs (each producing a 100kg test sample)				

Estimated services start & completion	01/01/26 - 07/01/26		
Milestones & payment schedule	We anticipate these steps will be important markers of progress toward delivering the Alkalinity Production Services.		
	Subject to Section 2.1 below, Company will provide evidence of the following milestones, and Buyer will pay Company's undisputed, properly submitted invoice(s) within 60 days of receiving them, pursuant to the payment instructions of Company:		
	Payment (USD)	Milestone	Estimated date
	\$200,000	Upon execution of the Agreement	Agreement execution date
	\$20,000	Upon sending of 3 (of 10) Runs of 100kg to the Testing Party, completion of no less than 20 total Operational Conditions of OAE materials, and delivery of the Documentation described in Section 4.1.	02/01/26
	\$105,000	Delivery of a draft report detailing the relationship between Run conditions, operational cost, and quality metrics for OAE Material to be used in ocean alkalinity enhancement, targeting the lowest cost per ton of carbon removed. Report shall include the information and data described in Section 4.1 and Appendix A and a techno-economic analysis detailing how much it will cost to produce OAE Materials at 1Mt scale using the optimal reactor and process conditions determined through the Alkalinity Production Services completed to date.	03/01/26
\$20,000	Upon sending 3 (cumulatively 6 of the 10 total) Runs of 100kg to the Testing Party, completion of no less than 40 total Operational Conditions of OAE Materials, and delivery of the Documentation described in Section 4.1 (following timely feedback from the Testing Party, i.e., analysis of the first 3 Runs), which will detail optimisation of Operational	04/01/26	

	Conditions to refine the engineering design for a very low capex and opex OAE Material and process that is suitable for OL.	
\$50,000	Revised TEM model and engineering revision based on feedback from the Operational Conditions and Runs and input from the Testing Party and Frontier.	04/15/26
\$30,000	Upon sending the final 4 (cumulatively 10 of the 10 total) Runs of 100kg to the Testing Party, completion of no less than 60 total Operational Conditions of OAE Materials, and delivery of the Documentation described in Section 4.1 (following timely feedback from the Testing Party), which will detail optimisation of Operational Conditions to refine the engineering design for a very low capex and opex OAE Material that is suitable for OL.	06/01/26
\$75,000	Delivery of an updated, final version of the report described above, incorporating any feedback delivered by Buyer or Frontier and the data and information resulting from the Operational Conditions and Runs that were performed after the draft report was composed.	07/01/26
